PROFESSIONAL SUMMARY

Software Developer experienced in building scalable full-stack applications using React, RESTful APIs, and SQL Server. Focused on backend logic, database design, and delivering reliable production systems.

TECHNICAL SKILLS

Languages: JavaScript, C#, Python, Java, SQL
Frontend & backend: React, HTML, CSS, ASP.NET Core, Node.js
Databases: SQL Server, MySQL, MongoDB
Testing & Tools: Postman, Jest, Cypress, Git, Docker, Linux

PROFESSIONAL EXPERIENCE

Upper Great Plains Transportation Institute (UGPTI), NDSU — Fargo, ND

Jan. 2025 - Present

Software Developer (Research Intern)

- Designed and developed full-stack web applications supporting analytics and operational reporting systems.
- Implemented end-to-end data flows from frontend to SQL Server-backed pipelines processing large structured datasets.
- Designed and optimized SQL Server stored procedures to ensure data consistency and relational integrity.
- Developed RESTful APIs for data ingestion, scheduled extracts, and system integrations.

Solomon's International — India

Apr. 2023 – Jul. 2024

Software Engineer

- Developed backend services and RESTful APIs using Node.js to support data processing and reporting workflows.
- Implemented structured data pipelines for text analytics, including preprocessing and validation logic.
- Wrote automation test scripts using Cypress and supported functional validation across releases.
- Participated in user acceptance testing (UAT) cycles and incorporated stakeholder feedback before production releases.

Solomon's International — India

May. 2021 – Aug. 2021

Software Engineer Intern

- Assisted in developing and testing RESTful APIs for internal web applications.
- Supported data validation and preprocessing tasks within backend workflows.
- Contributed to debugging and issue resolution across application layers.

PROJECTS

Food Organizer | MERN Stack

- Developed full-stack web application enabling users to track and manage household food inventory.
- Designed RESTful APIs and MongoDB schema for data persistence and retrieval.
- Implemented dashboard features, notifications, and recommendation logic to reduce food wastage.

Search & Recommendation System | Node.js, Python

- Designed backend logic for search and recommendation using structured data processing techniques.
- Implemented similarity-based filtering and ranking mechanisms for improved result relevance.

Real-Time Collaboration Tool | React, Node.js

- Built web-based collaborative platform supporting simultaneous user interactions.
- Implemented real-time data synchronization between client and server.
- Designed backend API services to manage session and user data.

EDUCATION

North Dakota State University — Fargo, ND

Aug. 2024 - Present

Master of science in Computer Science

Jawaharlal Nehru Technological University, Kakinada — India

Aug. 2019 – Apr. 2023

Bachelor of Technology in Computer Science
